

Budapest new energy charging station energy

Overview

We're building three revolutionary energy hubs combining DC fast charging (150-600 kW), solar generation (1-3 MWp per hub), and battery storage (0. Each hub combines DC fast charging, renewable power. At the end of last year, there were 3,191 electric charging stations requiring a license in Hungary, with 6,191 connectors, and the total amount of energy used reached a new peak in the fourth quarter, the Hungarian Energy and Public Utility Regulatory Authority (MEKH) informed MTI in a statement. OMV will start building a network of 28 ultra-fast electric car charging stations on the country's high-traffic routes by the end of the year. It plans to build a national-level. Based on MOL Group's decades of experience in mobility and in line with MOL GROUP's "2030+ Shape Tomorrow" strategy, we develop and maintain charging infrastructure for Electric Vehicles (BEV or PHEV) across Central Eastern Europe. The charging stations will be installed both inside and outside the airport, meaning that they will service a growing fleet of maintenance vehicles.
