

Can the large rooms in the community generate solar power

Overview

Local community buildings are ideal candidates for solar energy systems. Solar PV and battery storage systems can help to reduce the energy costs of community buildings. Installing solar on homes and businesses and community solar, those larger solar projects on large multifamily. Through the Clean Energy Program, DCAS works to expand distributed energy resources, including solar PV and energy storage installations across the City's portfolio of properties. Combined with declining equipment costs, New York State tax credits, and Inflation Reduction Act tax credits for commercial solar, going solar. The Solar Guidebook contains information, tools, and step-by-step instructions to support local governments managing solar energy development in their communities. The Guidebook's chapters cover a variety of solar energy topics including, the permitting process, property taxes, model solar energy. Installing solar arrays on commercial and public buildings could bring renewable energy to two-thirds of the nation's disadvantaged neighborhoods.
