

Energy Storage System Solar Photovoltaic Product Introduction

Overview

Solar photovoltaic (PV) energy and storage technologies are the ultimate, powerful combination for the goal of independent, self-serving power production and consumption throughout days, nights and bad weather. The idea of sun-based electricity generation and storing the produced power and creation of such – solar PV off-grid-systems stimulated minds and dreams in the early days of. Most people are not aware of the fact that except for traditional batteries, there are various electrochemical and mechanical technologies available that allow for the storage of energy. For years seen as the expensive bottleneck hampering the spread and mass market elevation of off-grid solar systems and even though still having only a tiny share in the overall energy system. Pumped hydro energy storage (PHES) is currently the major storage technology making up over 99% of the total storage capacity worldwide – equating to around 140 Gigawatts (G).
