

# How many volts is the outdoor power supply in New Zealand

## Overview

New Zealand has a standard voltage of 230V and a frequency of 50Hz, with the most commonly used plug type being Type I. Travelers usually need a plug adapter, but a voltage converter is generally not required. Type I is mainly used in Australia, New Zealand, Papua New Guinea, China and Argentina. (Click here for the full list of all countries that use type I) This 10 amp plug has two flat 1.6 mm thick blades, set at 30° to the vertical. In New Zealand (NZ), regulation 28 of the Electricity (Safety) Regulations 2010 requires single phase low voltage electricity to be supplied at a nominal voltage of 230 Volts (V) alternating current (AC), and except for momentary fluctuations must be kept within 6% of that nominal voltage. Electricity supplies worldwide can vary from anything between 100V and 240V. The plug shape is the big thing most travelers need to plan for, especially if you are coming from the United States, Canada, Mexico, the UK, Europe, Japan, South Korea, Singapore, South Africa, or many other parts of the world. Across New Zealand, the standard voltage is 230V, whilst the standard frequency is 50Hz. Will My 220 - 240 Volt Appliance Work in New.
