

Mobile power box for industrial and mining enterprises

Overview

A Portable Socket Box (or Portable Distribution Box) is a compact, self-contained unit that provides multiple power outlets from a single heavy-duty industrial inlet. It's designed to safely distribute power in locations where fixed wiring is unavailable or impractical. Mining mobile substations are divided into vehicle-mounted and sledge-mounted types. They adopt a modular design and integrate a high-voltage switch room, a transformer room, and a medium-low voltage switch room. The vehicle-mounted type realizes efficient movement through special transport flatbed. IMG focuses on offering its clients custom solution to power supply and distribution. With over 25 years of experience in the mining industry our knowledgeable sales and engineering staff can design a solution for virtually any surface mining, underground mining or tunneling application.
