

Photovoltaic energy storage safety distance

Overview

- The distance between battery containers should be 3 meters (long side) and 4 meters (short side). The system could include facilities with energy maintenance, maintenance tests, and emergency disposal of equipment with minimum separation from wallization was modelled under a given long-distance delivery mode, and the. Does altitude affect safety distances?

Yes - at elevations above 2000m, increase clearance by 5% per 500m due to reduced air density. • Per T/CEC.
